1.0.0
- Initial Release

2. Quick Start

First import the plugin, then read the following instructions.

2.1 How to view logs in game?

1. Steps:
1) Attach the "ScreenConsole" script to your camera object.
2) Set the options of "ScreenConsole".
3) Don't forget to drag the GestureDetector.prefab to the "ScreenConsole".

2. Options of "ScreenConsole"

- Menu Button Width
The initial button width of the menu window.

- Menu Button Height
The initial button height of the menu window.

- Menu Font Size
The initial font size of the menu window.

- Console Button Width
The initial button width of the console window.

- Console Button Height
The initial button height of the console window.

- Console Font Size
The initial font size of the console window.

- Console Font Size Step
The font size step of the console window.
For example, if you set this value to 1, the font size of the console window will increase 1 when you click the button "+" of the menu window.

- Console Size Scale Step

The size scale step of the console window.

For example, if you set this value to 0.1, the width of the console window will increase 10% when you click the button ">" of the menu window.

- Console Bg Color

The background color of the console. It can be transparent. If this is set to be (0, 0, 0, 0), the console will use the default bg color.
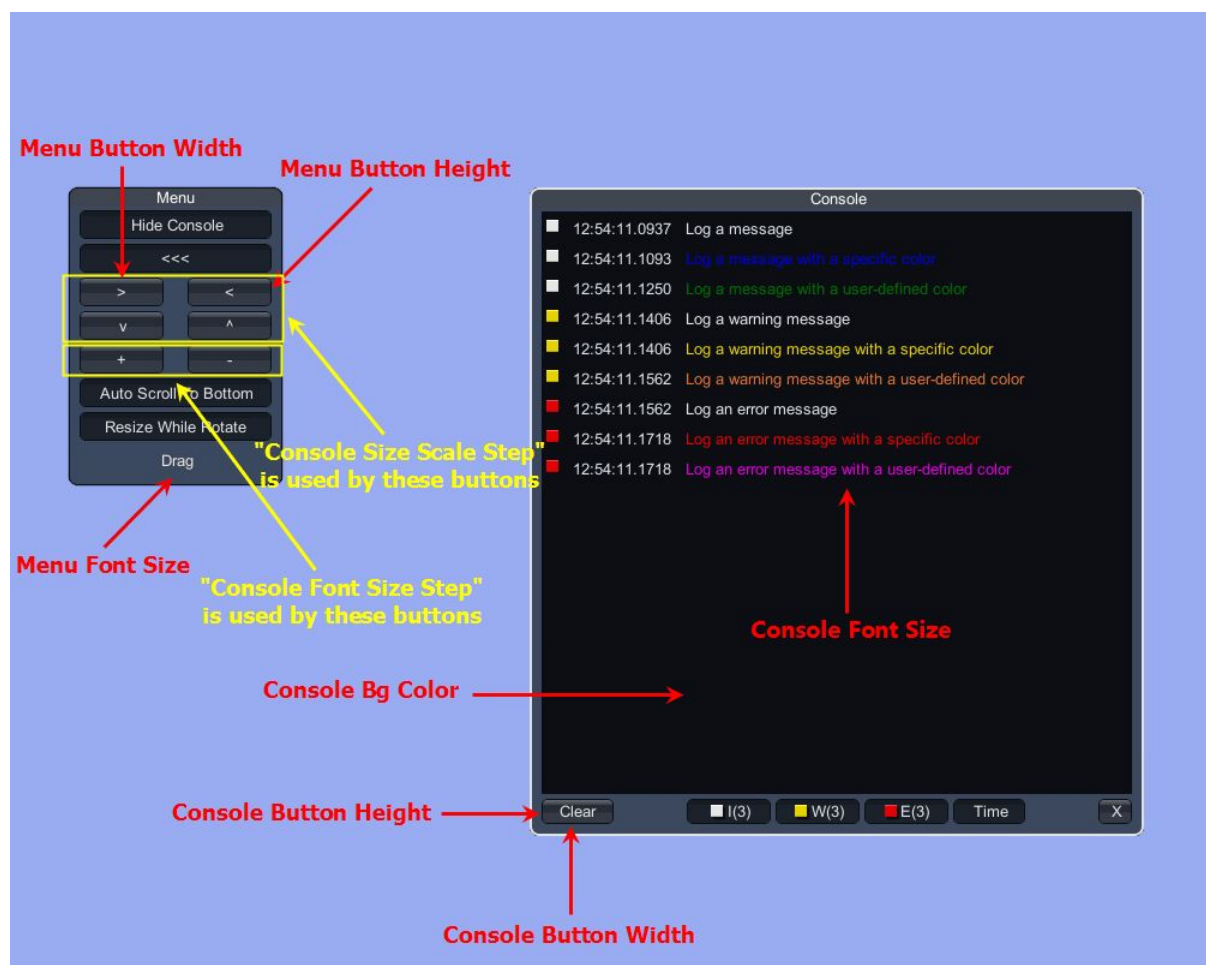

- Max Log Count

How many logs can be kept in the console?

- Show console

If you select this, the console will be shown automaticly in game. Otherwize you should click "Show Console" button in game to show the console.

- Gesture Detector Prefab

Drag the GestureDetector.prefab to here.

3. Tips:

Don't forget to disable or remove "ScreenConsole" script when you make a release build.
